Indoor Air Quality Testing Services

Indoor air quality testing is typically defined as testing the air in offices, homes, and commercial buildings. Indoor air quality (IAQ) can be affected by a number of different factors. IAQ investigations completed by the National Institute of Occupational Safety and Health (NIOSH) found problems resulting from:

NIOSH Indoor Air Investigations
 Probable Causes of Sick Buildings

Winnipeg Air Testing provides a number of Indoor Air Quality tests. The table below is a useful guide to help you select the right test for you.

Table of Symptoms and Probable Indoor Air Quality Causes

| Concern | Probable Cause | Best Test |
|---------------------|--|----------------|
| Stuffy Air | Inadequate Ventilation | IAQ Calc |
| Musty Mouldy Odour | Mould | Mould Test |
| Coughing/Congestion | Mould | Mould Test |
| Chemical Odour | Household Chemicals | VOC Test |
| Headaches | Inadequate Ventilation, Carbon Monoxide, Mould | IAQ Screen |
| Dry Itchy Skin | Low Humidity, Allergens | IAQ Screen |
| Eye Irritation | Low Humidity, Allergens | IAQ Screen |
| Sewer Odour | Sewer Leak, Septic Fields | Ambient Bottle |
| Smoke/Fire Residue | Fire | Post-Fire |

Additional information on the individual tests are provided as separate resources on the web page.
