## Take Home Air Test Kits

We have kits that allow a homeowner to collect an air sample themselves. The take home kits have the same equipment that our technicians bring out but saves the homeowner money. Take home air kits are available for:

- Mould
- Asbestos Fibres
- Volatile Organic Compounds (VOCs)
- Cigarette Smoke
- Marijuana Smoke (THC)

### Image of a Take Home Mould Kit

The kit comes with a stand and an air pump that draws air through a sampling cassette. The pump comes calibrated and can be used to collect multiple samples if needed. A mould sample can be collected in 5 minutes and comes with complete instructions. Bring the sample back and we will analyze the sample and provide a report on the number and breakdown of mould spores in the sample – including an interpretation of findings.

The cost for a mould kit or asbestos kit cost \$120.00. This includes the rental of the kit, the analysis of one sample and a report and findings. Additional samples can be added for an additional \$60.00 per sample. Your results are typically available 1-2 days after we receive your samples. Please call us for the cost of the other tests. The GST is added to these prices.
